

ARGUS® Enhancement: ARGUS® WLAN Analyzer

for complete WLAN analysis

The ARGUS® testers already offer extensive WLAN management functions where the ARGUS® is the WLAN access point, e.g.:

- Remote control of the ARGUS® via VNC and web server
- Test result upload via web server, WebDAV and FTP
- Configuration download via WebDAV and FTP
- Firmware update via FTP download

The WLAN Basic option (ARGUS® in client mode) extends these functions with additional elementary WLAN tests, e.g.:

- Scan for networks/access points
- Connecting to networks/access points
- Display of the complete information about the access points
- Support of all IP tests that the ARGUS® supports

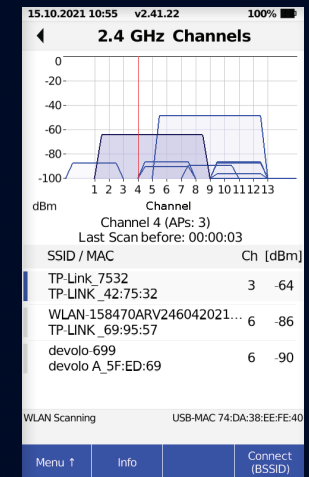

The new ARGUS® WLAN Analyzer expands this range of functions even further - the new option makes it easier to keep track of channel utilization:

- Displaying the networks during existing WLAN connection
- Searching for networks again during existing WLAN connection
- Advanced automated evaluation of found networks and display of all AP info
- Manual evaluation of channels possible in tabular and graphical form

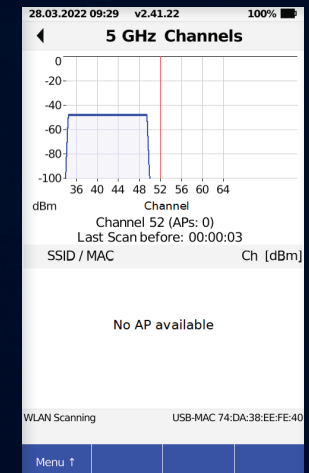

This means that the user no longer has to gather this information manually. This makes WLAN analysis much more efficient and, above all, easier. It is quick and easy to find out whether the full channel bandwidth is available, which channel is suitable and how strong it is. This makes the ARGUS® WLAN Analyzer ideal for setting up new access points.

Function	ARGUS® 166/163/156/153	ARGUS® 300/260
Ping	Yes	Yes
Traceroute	Yes	Yes
Path MTU	Yes	Yes
iperf	Yes	Yes
Real Speed (RFC6349)	Yes	Yes
HTTP Up/Download	Yes	Yes
FTP Up/Download	Yes	Yes
FTP Server	Yes	Yes
Text Browser	Yes	No
GUI Web Browser	No	Yes
VoIP	Yes	Yes
IPTV	Yes	Yes
Video on Demand	Yes	Yes
