

ARGUS® Mobile App

for the transmission of test results

The ARGUS® Mobile App offers you a simple solution for seamless transmission and analysis of measurement protocols. Developed for devices with Android 10 or iOS 16 and higher, the app enables a direct connection to a latest generation ARGUS®. Users can efficiently transfer measurement data to their smartphone and securely store it there. The app supports the immediate display and detailed evaluation of logs directly on the device. With the ARGUS® Mobile app, test results can also be forwarded to connected systems for archiving and further processing. The user-friendly interface and seamless integration ensure that all processes, from data acquisition to analysis, run efficiently. The ARGUS® Mobile App is available from firmware version 4.90 for the ARGUS® 300, 260, F300, F240 and F200 devices.

Main functions:

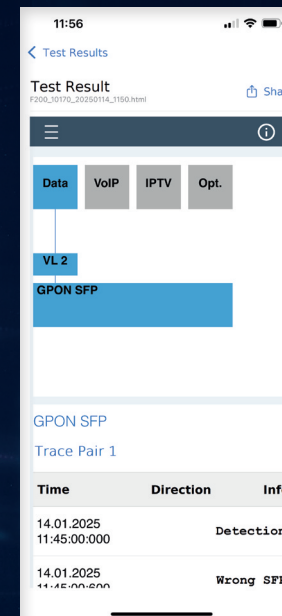

- **Direct connection:** Quick and easy connection to your ARGUS®.
- **Data transmission:** Efficient transfer of test results to the smartphone.
- **Data display:** Immediate display and evaluation of the measurement data.
- **User-friendliness:** Intuitive user interface for smooth operation.

The ARGUS® Mobile App is ideal for professionals who value fast, secure, and easy measurement data transfer. Regular updates and a robust system architecture ensure a reliable and future-proof solution.

Why ARGUS® Mobile App?

- **Efficiency:** Fast and direct transmission of measurement data—without any detours.
- **Security:** Reliable storage and secure sharing of your logs.
- **Flexibility:** Flexible data management for a wide range of applications.
